Sprint 2

Krutik Tejalkumar Shah
Mark (LiangShu) Chen
*Steven Hans Limantoro*
Tanzim Ahmed
Tony Chen
Pasa Aslan
Payam Yektamaram

ACTIVE Admin and service functionality.

Our planned velocity for this sprint was 37 points and our previous sprint velocity was 29 points. However, we moved one unstarted story from our current sprint as it made more sense to do it in the upcoming sprint. Therefore, we committed to 34 points for sprint 2 which is five more points than sprint 1. However, this wasn't deemed as an issue as we evaluated that we now had a better grasp of team management and organization.

Our burndown chart makes it look like we finished all our tasks in the last few days however this is not an accurate depiction. Our user stories have a wide range of subtasks that require quite a bit of time to complete due to our stories having long critical paths. Simply, it is near impossible for a ticket to be completed in the early stages as a user story requires the completion of a backend, frontend, and documentation task. The frontend task simply cannot be done before the backend REST API endpoint is finished and merged into dev. Finally, the documentation tasks depend on the completion of the aforementioned tasks.
